

NOTES:
 1) +/- VCC must not exceed the maximum rated input voltage of the regulators used in your circuit. Max AC voltage approximately: $V_{rms} = (V_{imax} + 0.7) / \sqrt{2}$. Check manufacturer's datasheet for exact ratings! (L7815CV, L7915CV Absolute maximum ratings: $V_i = 35V$ $I_{max} = 1.5A$)
 2) C1, C2 power capacitors are used for high power of the unregulated output.
 3) C3, C5 are recommended for HF/RF noise decoupling.

Title +/-15V Regulated Power Supply		
Size A4	Number 1 of 1	Revision Rev 1.0
Date: 12-02-2022	Sheet of 1	
File: C:\Users\...15V Regulated Power Supply	Schematic By: Patsaoglou P.
